BOOK ABSTRACT

EDUCATION SCIENCE RESEARCH AND DEVELOPMENT.

We are working to create a world where people are curious about the wonders of the world . Trying to understand the infinite wonders of the nature with our limited human intellect is a story that has no ending. Every Scientific breakthrough or technological advancement starts with a spark of curiosity ignited by a teacher.we salute the Educators who empower us to become the Innovators. No matter how syllabus bound a system of education is, it's efficiency will significantly decline, if it permits the little space for the teachers to adjust their pedagogical apporch to their students lived experiences. When your education limits your imagination it is called indoctrination. But Education is about opening doors to opportunities, better livelihoods and understanding each other a bit more every day.

Goal of Education is to create people capable of doing new things, not simply repeating what other generations have done,is widely attributed to Jean Piaget a renowned swiss psychologist.wisdom is not a product of schooling but of the lifelong attempt to acquire it.

In both creativity and education, the concept of "impossible" is largely a matter of perspective, defined more by structural limitations, mindset, and available resources than by true, insurmountable barriers. While physical laws impose absolute limits, creative and educational "impossibilities" are often temporary barriers waiting to be broken.

Here is a breakdown of how "impossible" functions in these fields:

In Creativity: "Impossible" is Temporary

Creativity is often defined as the act of making the "impossible" possible by connecting previously unconnected ideas.

The Myth of Absolute Impossibility: Many things once deemed impossible (e.g., flight, instant global communication, gene editing) are now mundane realities because creative thinkers refused to accept the limitation.

Constraints Fuel Innovation: The "impossible" acts as a boundary that forces the brain to abandon conventional paths, fostering divergent thinking and creating new solutions.

The Real Barrier is Fear: The biggest hurdle is not a lack of potential, but the fear of being wrong or appearing foolish.

In Education: "Impossible" is Often Structural

While the potential for learning is nearly limitless, traditional educational systems often construct artificial "impossibilities" through rigidity.

Systemic Limitations: Rigid, standardized curricula and a focus on conformity can make nurturing individual creativity feel "almost impossible" within the current system.

The "Learning Outcome" Trap: The reliance on predetermined learning outcomes—defining exactly what a student should know

Can stifle the unexpected, often messy process of creative discovery .

Perpetual motion machines are generally considered a fringe Scientific or Historical topic rather than a community project.while they are often analyzed in PDF papers from academic institutions and

independent researchers, they don't work, and are regarded as impossible under current laws of physics, often violating the first and second laws of Thermodynamics. Historical and Scientific study : Many papers exist discussing the History and theoretical failures of these machines such as those published repositories,while evaluate their impossibility and the inventors way of thinking . These designs overcome all these hurdles and reach the goal of Education.

ENERGY KNOWLEDGE MANTHAN

WHAT WE SOW SO WE REAP

Fringe Science refers to highly speculative, unorthodox,or avant garde research that departs significantly from mainstream Scientific theories , while it exists at extream boundaries of established disciplines,it attempts to use formal Scientific methodology.

Lack of mainstream support: Because these ideas are highly novel or challenge established paradigms,they rarely receive significant funding or publication in mainstream academic journals.

Methodology : True fringe Science operates within the realm of the Scientific method (relaying on testing the falsifiable hypothesis.

High failure Rate : Many fringe concepts ultimately prove to be incorrect once subjected to broader testing.

Historical shifts : (Fringe to mainstream)

Occasionally,theories that were once dismissed as fringe are rigorously proven overtime and become widely accepted.

Historical examples include; The Big Bang theory : Initially controversial and considered highly speculative,it is now leading accepted model for the origin of the universe . Continental drift,Quantum Entanglement etc.

Thermodynamics impossible statements which has no tests and proofs are pseudoscience.

We create what we want, we get what we want ,or what we don't refuse .We wanted to go to the moon, so we went there . We achieve what we want to achieve. If we are not achieving something , it is because we have not put our minds to it .we create what we want. What we want and how get it depends on our mindsets .It is extremely difficult to change mindsets once they are formed. We create the world in accordance with our mindset. We need to invent ways to change our perspective continually and reconfigure our mindset quickly as new knowledge emerges .we can reconfigure our world if we can configure our mindset as we need to construct Indian ancestors perpetual motion machine or we can change intangible Cultural heritage expressions as tangible cultural heritage expressions with inexhaustible nature forces like Gravity and Atmosphere.

Impossible statements are limited to low grade energy like heat engines. These designs are based on high grade energy and use inexhaustible nature forces like Gravity Atmosphere, rest water potential energy along with artificial vacuum in closed cylinders.

NATURE WHEELS MACHINE THEOREM : If Nature forces become source input and less intensity areas sink are arranged in a machine then nature forces always act on it and make it as perpetual motion freely falling vertical body weight can easily be converted as horizontal force . Force causes motion. Weight is a force . Weight causes motion . Weight lasts forever . Motion lasts forever . Hence perpetual motion. Clausius theorem states that entropy change is zero in reversible process and the negative Gibbs free energy is the necessary and sufficient condition for constructing second kind of perpetual

motion machine. Nature abhors vacuum .Total natural forces on the machines are not zero and they are inunstable condition for motion .As long as there is fuel in vehicle entropy, friction etc can't stop it similarly as long as inexhaustible nature forces are inputs to a machine then friction entropy etc can't stop it . This is the evidence based science ,not fringe Science or pseudoscience . One day man will connect his apparatus to the very wheel work of the universe and very forces that motivate the planet in their orbits and cause them to rotate will rotate his own machinary . Bramhagupta, Nicola Tesla dreams on Perpetual motion machines satisfy and work with inexhaustible nature forces .AN INNOVATOR A GAME CHANGER refers to a person or idea that introduces a groundbreaking new concept or technology that significantly alters the existing landscape within a particular field, often disrupting the status quo and forcing others to adapt to new useful approach. Essentially , someone who drastically changes the way things are done by pushing the boundaries of Innovations. SATELLITE ON THE SURFACE OF THE EARTH is judged and awarded by State council of educational research and training at state level Science fair . Hence we can declare constructing second kind of perpetual motion machines with high grade energy like Gravity Atmosphere is possible .These are already partly in use and (wind mills, Hydroturbines) working ,now we make them to continue their work .
